EQUIPMENT INSPECTION

| MACHINE | SERIAL NUMBER | INSPECTION GRADE |
|------------------|---------------|------------------|
| Injection Molder | SGMM-12345 | FAIL |

INSPECTION SUMMARY

During the inspection of the injection molder, it was discovered that the machine was producing defective parts due to a clogged nozzle. The technician investigated the issue and found that there was residual material buildup inside the nozzle. After cleaning the nozzle, the machine resumed production of good quality parts. To avoid similar issues in the future, the technician advised implementing a regular maintenance schedule. Overall, swift action was taken to identify and resolve the problem, ensuring that production could continue without further interruptions.
